

Oxygen Framework

1. Installing the Oxygen Framework

Prerequisites

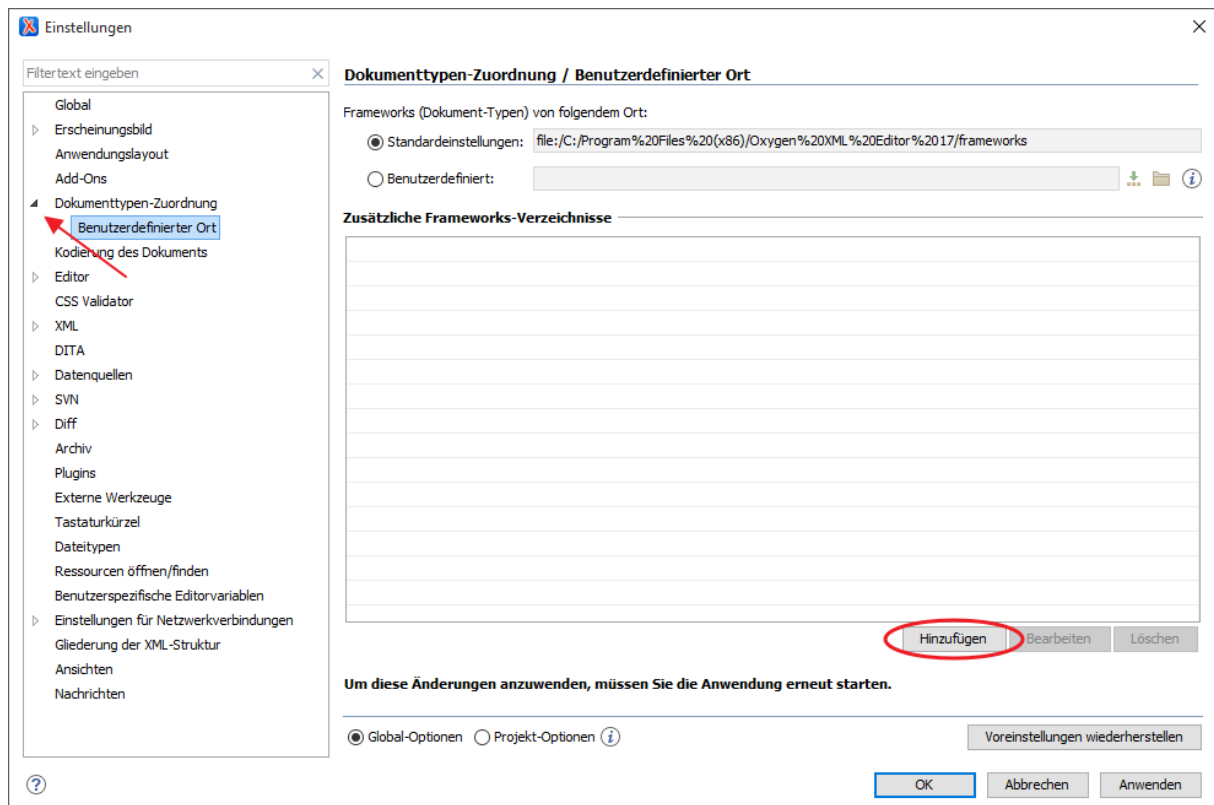

- Oxygen XML Editor is installed.
- Github Desktop

Step 1: Get the Framework data

- Open Github Desktop
- Clone the Software Repository (in a directory easy to find ;))

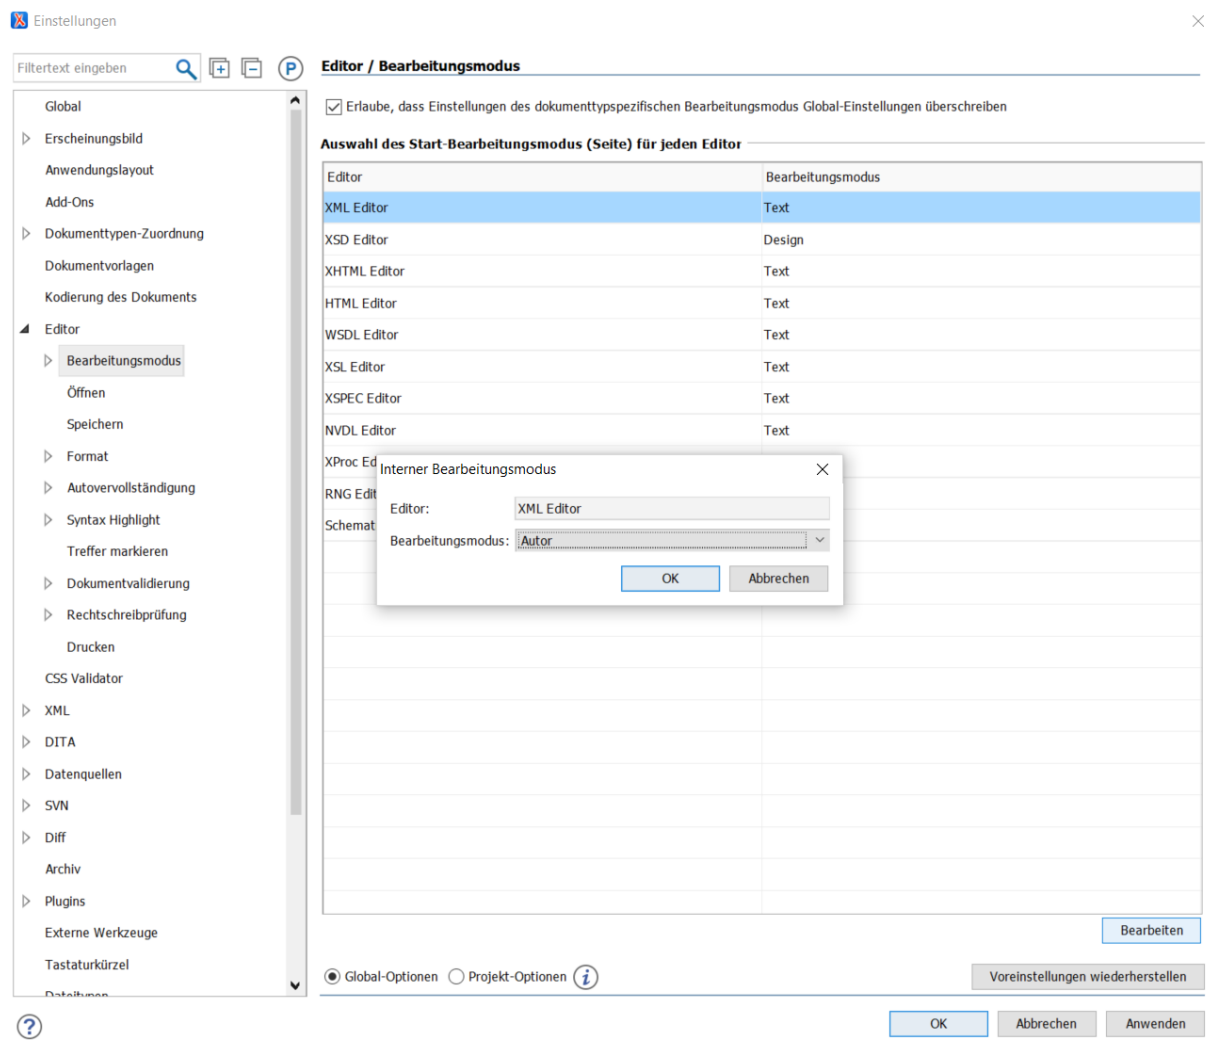

Step 2: Associate the Framework

1. Open the Oxygen Editor
2. Navigate to `Options > Preferences > Document Type Association > Locations` // 'Optionen > Einstellungen > Dokumententypen-Zuordnung > Orte'.
3. Click `Add` // 'Hinzufügen', browse to the cloned repository folder and navigate to the Folder `frameworks`.
4. Click `OK`.
5. At the bottom of the page switch from `text mode` (XML code view) to `author mode` (framework view) to see the rendered file.

Step 2.5 (Optional but Recommended) - Author Mode View as 'First View'

- Open `Options > Preferences > Editor > Edit Modes` // 'Optionen > Einstellungen > Bearbeitungsmodus'.
- Set `XML Editor > Edit` to "Author" (instead of "Text").
- Click `OK`.

Step 3: Test if everything went to plan

- Open any Manuscript TEI.
- The framework was correctly assigned if it looks like this (if not, something went wrong):
